Shandong, China

Products: noraplan® signa

Installation date: 2017

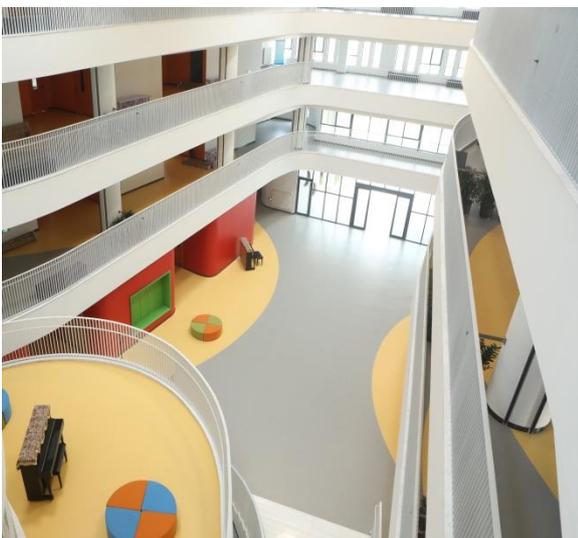

Project size: 26,279m²

Installation area: main hall, corridor, playroom, library, balcony and classroom, etc.

Weifang Hansen International School is the most high-end international school in Shandong province built by the 271 education group. "Everything for the children"—It is not only the educational concept of the school, but also the overall design principle of the construction planning. Here you can find lots of new teaching method and advanced facility, such as multi-functional arts centers, swimming pools, gyms, robot classrooms, etc.

Hansen international school has strict requirements for buildings and facilities. The end-users prefer the flooring which is environment-friendly, easy to maintain and can

provide underfoot comfort; while the designers want to choose the flooring which has plenty of design and can bring the inspiration.

The planned service life of the school buildings is 50 years, so the durability of flooring is also the priority at selection, not only for economic benefit, but also energy saving by promoting the product utilization. About 30,000m² **nora**[®] rubber floorings are installed on the area of concentrated traffic and frequent service, such as the main hall, corridors, playrooms, and library, etc.

Create a healthy learning environment for teachers and students

Healthy indoor air is extremely important to the teachers and students, who spend the whole day in the school. Children's bodies in particular are still developing and react sensitively to pollutants. **nora**[®] flooring contains no plasticizer, halogens and PVC, contributing to fresh and healthy indoor air. Children can study with energy and pleasure here!

No matter if there is the risk of slip such as in the wet entrance of the swimming pool, at the lounge of gymnasium and in the watching stand of the stadium; students can feel safe with the slip resistant **nora**[®] floorings. As **nora**[®] comes with excellent slip resistance and shock absorbing properties, the children of various ages from kindergarten to high school can play on the flooring to enjoy themselves, without any worry for safety.

For the teachers who must stand for long time, **nora**[®] flooring with underfoot comfort and ergonomic elasticity can significantly reduce the fatigue of the human body. Without fatigue, the teachers may dedicate themselves even more into teaching.

Our floorings with performance of footfall sound absorption can not only reduce noise, but also insulate the sound transfer between different floors, contributing to the quiet environment of the school.

Clean easily and economically

Thanks to the dense surface of **nora**[®] flooring, there is no need of wax throughout the life cycle, to prevent the pungent odor of chemical detergent. And **nora**[®] flooring don't have any coat on the surface,

The daily cleaning can be done with water only and the periodical usage of **nora**[®] pad can keep excellent appearance of the floorings

throughout the service life, to save the expensive maintenance cost for the end-users.

nora[®] flooring can be installed by our unique seamless cutting method, which can save the cost of welding, avoid the dirt accumulated in the seams, and make the school environment healthier.

Rich colors add more flexibility to architecture

In the different application areas of the building, **nora**[®] flooring with an abundant choice of colors can meet diversified and individualized indoor designs.

The Weifang Hansen international school uses the flooring of different colors to divide the different functional areas, making the whole building more vivid. How well young people learn is decisively dependent upon their learning environment. The overall atmosphere of rooms is built by colors, materials and overall arrangement, and shall animate students to learn.

The education sector carries our hope to foster the next generation, and everyone undertakes significant responsibility. **nora**[®] flooring cannot only meet the highest quality requirements of the education sector, but also comply with the standard of environment safety at planning, contributing to the sustainability of educational buildings.
