SYSTEM MODUSHIELD™

MODUSHIELD™ INSTALLATION BROCHURE

ADVANCED PROTECTION | IMPERMEABLE DESIGN

MADE FOR RESIDENT RESTORATION

Senior living environments are all about care. Interface understands what that means—more time should be spent on resident care, not maintenance. That's why we made ModuShield™, an innovative solution that takes carpet tile installation to the next level.

Unlock ultimate hygiene control, durability, and ease of maintenance with a solution made for purpose and without compromising on resident health, safety, or efficiency.

AND HEALING ENVIRONMENTS

WHY CHOOSE MODUSHIELD?

Senior living spaces require flooring solutions that go above and beyond, just like their caregivers. The ModuShield™ carpet tile installation system does that and more, offering the following benefits:

TAILORED PERFORMANCE

We engineered ModuShield to provide a durable, hygienic, cost-effective solution – designed to support restoration and healing in senior living environments.

PROTECTED AGAINST ACCIDENTS

Ideal for areas prone to spills, ModuShield ensures liquids and contaminants remain above the surface, safeguarding your facility's subfloor.

ENHANCED EFFICIENCY

Made to deliver superior performance, ease of maintenance, and long-term savings, ModuShield helps you focus on what matters most: resident care.

What's Better Than Install in Just Three Steps?

Carpet tile installation should be as easy as one, two, three. ModuShield is made for that. You can install high-performing flooring solutions quickly and efficiently, all achieved through industry-leading innovations.

1. Subfloor Sealing

The first step is the foundation. Give your floors an extra layer of protection with ModuShield's Mediseal™ floor sealer. This helps prevent moisture or spills from reaching the subfloor, giving your carpet tiles a longer, healthier lifecycle.

2. Carpet Installation

The next step is installation. Position your 1m x 1m carpet tiles directly onto the subfloor – no adhesives needed. Designed to be both seamless and protective, the installation process ensures a secure fit for each tile as the seam sealer attaches to each backing. Repeat this with each tile for complete coverage and a beautiful finish.

3. Seam Sealer Application

The final step is the seam sealer. Ensuring long-lasting defense against spills and contaminants, a seam sealer is applied to all joints and perimeters, creating an impermeable barrier for your floor.

For detailed installation instructions, refer to our [Interface Installation Guidelines](#).

KEY FEATURES & BENEFITS

Looking for ease of maintenance, reduced costs, and enhanced resident comfort? ModuShield can help.

Complete Protection

ModuShield is designed for worry-free operations and engineered for reliable, worry-free performance. It's designed to prioritise health and safety by keeping spills and bio-contaminants contained on the surface, protecting your facility's subfloor and minimising the risk of contamination.

Enhanced Infection Control

Uncover a healthier, cleaner environment for residents and staff with ModuShield. Our carpet tiles are made to stand up and stand out by using Intersept™, the patented antimicrobial technology embedded directly into the backing to actively combat bio-contaminants and odours.

Seamless Replacements

Fewer seams equal less risk. By installing our 1m x 1m carpet tiles, ModuShield reduces the number of seams on your floor by 75% compared to traditional 50cm tiles. This means fewer seam-related issues and supporting quicker, easier repairs, with no cutting required.

Cost-Efficient Operation

Take the heavy lifting out of carpet tile installation. Senior living spaces require continuous operations; that's why ModuShield uses a glueless installation method, meaning tiles can be quickly and quietly replaced without disrupting operations while also reducing operational costs.

Beautiful, High-Performance Design

Our carpet tiles are made for purpose and without compromising on design, performance, innovation, or sustainability. From lobbies to resident rooms, every colour, pattern, and detail is the result of innovative design thinking, made to support the needs of residents and staff.
